Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-~~5~~ are rejected under 35 U.S.C. 103(a) as being unpatentable over admitted prior art in view of Marko et al.(5,325,405).

With regards to claim 1, the admitted prior art teaches a single slot based data burst comprising: a plurality of time slot based data frames (Fig. 5B). What the admitted prior art fails to teach is the limitation, less than all of said plurality of time slot based data frames including a sync word, remaining ones of said plurality of time slot based data frames not including a sync word. Marko in Fig. 1b, shows multiple frames with the first frame carrying sync information. It would have been obvious to one of ordinary skill in the art to combine the teaching in Marko with the admitted prior art for the purpose of excluding the synch information from subsequent frames. The motivation is to achieve data bandwidth efficiency.

Claim 2 is rejected because the admitted prior art teaches TDMA frames.

Claims 3-4 are rejected because Marko teaches sync information included at the beginning of said less than all of said plurality of time slot based data frames.(Fig. 1b).

Claim 5 is rejected because Marko teaches a data burst wherein said remaining ones of said time slot based data frames include data payload in a position containing said sync word in said less than all of said plurality of time slot based data frames.(Fig. 1b).

Allowable Subject Matter

Claims 6-13 are allowed.
